Education

Master of Computer Applications

Manakula Vinayagar Institute of Technology College

2025 - 2027

Bachelor of Computer Applications

Achariya Arts and science College

2022 - 2025

Higher Secondary school (CBSE)

Jawahar Navodaya Vidyalaya

2021 - 2022

SSLC (STATE BOARD OF TAMILNADU)

Bharatha Devi English High School

2019 - 2020

Hard Skills

Python

Front-end Development

Machine Learning

Deep Learning

Artificial Intelligence

Version Control

Excel

Data Analysis

Soft Skills

Communication

Teamwork

Time Management

Problem-Solving

Adaptability

About Me

Motivated and detail-oriented graduate with hands-on experience in Artificial Intelligence, Machine Learning, Data Analytics, and Front-End Web Development. Proficient in Python, automation tools, and real-time computer vision systems. Adept at deploying ML models and developing user-friendly applications. Eager to contribute strong technical and problem-solving skills in AI and software development domains

Certifications

ChatGPT & AI Tools Workshop

Powerbi Workshop

National Level AWS Workshop

National Level Conference on IPR for Innovative Research Methodology

National Level Workshop on FullStack Development

Backend Development Workshop organized by the Google Developer Students Club (GDSC)

Membership

Member of Code Club (2023-2025)

I am proud to be a member of the Code Club, where I actively participate in coding challenges, workshops, and collaborative projects. Being part of this club has provided me with valuable opportunities to enhance my programming skills, collaborate with like-minded individuals, and contribute to various coding initiatives. It's a great platform for learning, growth, and staying updated with the latest trends in the tech world.

Student Welfare Secretary on Student Council (2024-2025)

I am honored to serve as the Student Welfare Secretary on the Student Council. In this role, I work closely with fellow council members to ensure the well being of students, organize welfare programs, and advocate for their needs and concerns. It's a rewarding responsibility that has helped me develop leadership, communication, and problem solving skills while making a positive impact on the student community.

PROJECTS AND INTERNSHIP

Projects

Pondicherry University Result Automation Engine

A Python-based automation tool designed to streamline the process of downloading and managing student results. Utilizing Selenium for web automation and PyPDF2 for PDF handling, the system automates result retrieval, organization, and watermarking, providing efficient result processing for academic administrators.

Realtime Face Recognition Attendance System

Realtime Face Recognition Attendance System Developed a real-time face recognition system using OpenCV and deep learning models. The system captures and identifies faces from a live camera feed, marking attendance instantly. This project improves traditional attendance systems by providing a seamless, contactless, and automated solution for tracking attendance in classrooms or workplaces

Personal Portfolio

A personal portfolio website built to showcase projects, skills, and experience in AI, machine learning, and web development. The site is designed with a responsive layout using HTML, CSS, and JavaScript, featuring sections for work samples, professional summaries, and contact details, offering a professional online presence for potential clients and employers.

Multiple Disease Predictor

A machine learning-powered web application that predicts the likelihood of multiple diseases, such as Diabetes, Heart Disease, and Parkinson's Disease, based on patient input data. The system employs various ML algorithms built with Python and Scikit-learn, with the highest-performing models deployed via a Streamlit web interface, enabling users to receive fast, accessible health predictions.

Drowsiness Detection with Sentiment Analysis

A computer vision and natural language processing (NLP) system designed to improve road safety by detecting driver drowsiness through live video feed analysis using OpenCV, combined with sentiment analysis of user text inputs. The system generates alerts to prevent accidents by monitoring both facial cues and emotional state.

Fertilizer Recommendation System

A smart agricultural solution that suggests optimal fertilizers based on soil type, crop selection, and environmental conditions. Developed using Python and Scikit-learn, the system analyzes input parameters to recommend the best fertilizer, enhancing crop yield and promoting sustainable farming practices.

AI-Powered Supply Chain Inventory Rebalancing and Demand Intelligence System

Developed an AI-Powered Supply Chain Inventory Rebalancing System using React.js, Vue.js, FastAPI, Python, and MySQL. The application uses machine learning models to forecast demand and analyze inventory across multiple depots. Implemented an intelligent recommendation engine to identify surplus and deficit hubs and optimize inter-depot stock transfers. Designed interactive dashboards for inventory monitoring, demand analytics, logistics optimization, and transfer approvals. The solution reduces excess inventory, minimizes production costs, and improves overall supply chain efficiency through data-driven decision-making.

Internship

Web Development internship at IgniteLabs Private Limited - 8 months

I am pleased to share that I have successfully completed a Web Development internship at IgniteLabs Private Limited. During this internship, I gained hands-on experience in designing and developing responsive, user-friendly web applications. I worked with front-end and back-end technologies, collaborated on real-time projects, and enhanced my skills in HTML, CSS, JavaScript, and web frameworks. This valuable experience improved my technical abilities and gave me insight into industry-standard development practices.

Artificial Intelligence Intern | Cavin Infotech Pvt. Ltd. | Feb 2026 – Present

Collaborated with project teams in planning, development, testing, and deployment of AI solutions. Assisted in machine learning model development, data preprocessing, feature engineering, and model evaluation. Participated in technical discussions, documentation, and testing activities to support successful project delivery. Gained hands-on experience with AI technologies and data analysis techniques while working on real-world projects. Contributed to improving model performance and ensuring the quality and reliability of project outcomes.
